FIRST DOUGH

INGREDIENTS		PREPARATION

YEAST	g 30	When the dough begins to take shape pour the sugar and then the yolks gradually in more than
WATER	g 2300	once and keep on kneading until the dough is well-combined and smooth.
CASTER SUGAR	g 500	At the end, add softened butter in 3-4 times.
EGG YOLK	g 1600	Make sure that the temperature of the dough is 26-28°C.
UNSALTED BUTTER 82% FAT	g 2000	Let rise for 12-14 hours at 22-24°C with the 70-80% of relative humidity. If the proofer room is devoid
		of humidifier, cover the dough with a plastic cloth.

ADVICE:

The dough shall quadruple its initial volume.

- We suggest to cut out a 250g piece of dough and to put it into a 1L jug to check the pace of the leavening and verify the quadruplication of the volume.
- We suggest to begin to knead at second speed and then, when at ¾ of the kneading time, change to first speed and bring the kneading to end.
- If the temperature of the first dough is above 28°C, it will be necessary to decrease the leavening time.
- If you are using a planetary mixer with a "dough hook" attachment or a spiral mixer you will have to reduce the amount of water specified in the first dogh (we suggest you to use 2400/2250 gr)

		Roll them up tight again and transfer into the specific paper moulds.
		Put in the proofer room at 28-30°C with relative humidity of about 70% until the top of the dough
