ut 70/80%. If the proofer is unprovided of the humidifier, cover the dough with a plastic cloth. During this first process, the dough should have quadrupled its initial volume.

ADVICES:

- -We suggest cutting out a 250g piece of the dough and to put it into a 1L jug to check the pace of the leavening and verify the quadruplication of its volume.
- -Start kneading on second speed and when around the end of the kneading finish on first speed.
- -If the temperature of the first dough is higher than 28°C, you should shorten the first rising time.
- -If using a spiral or a hook planetary mixer it is important to reduce the amount of water for the first dough from 2400 to 2300gr.

		-Place into the proofer at 28-30°C with relative humidity of 70-80%, until the top of the dough is 1 cm
		lower from the mould. If the proofer is unprovided of the humidifier, cover the pastry with a plastic
		cloth.

GLAZE

PISTACHIO FILLING

FINAL COMPOSITION

Once the proofing process is complete, let the colomba rest at room temperature for 20-25 minutes until a light film is formed on the surface.

- -Cover the surface of the products with the glaze and decorate it with hazelnuts and then sprinkle with granulated and icing sugar.
- -Bake at 160-170°C. The baking time depends on the weight of the colomba (about 50 minutes for the 1kg pieces) but bake until the core temperature reaches a core temperature of 93-95°C.
- -Once churned out from the oven turn the colombe upside down with the help of the toothed racks.
- -Let the fresh baked colombe cool upside down for 8-10 hours before packing them into moplefan bags.

ADVICES:

How to calculate the temperature of the water for the first dough:

If you are using a double arm mixer this is the right procedure. If you are using a spiral mixer, considering that it warms up the dough, lower the temperature at least of 5°C.

To obtain the right temperature, for example 26°C, follow this scheme:

It is mandatory to know and use 3 values:

- 1)The value of the room temperature
- 2)The value of the DOLCEFORNO temperature
- 3) The value of the used mixer (double arm 15, spiral or planetary 20)

CALCULATION: final temperature 26° C x 3 (fixed number) = 78 - Value 1 (e.g. 20° C) - VALUE 2 (e.g. 20° C) - Value 3 (e.g. 15) = 78 - 20 - 18 - 15 = 25. 25 should be the temperature of the first dough if using a double
